STREET FURNITURE

## INVENTED AND PRODUCED IN FRANCE

---

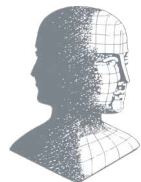

Sineu Graff is engaged in a trajectory to reduce its carbon footprint, according to the **ACT Step by Step approach labelled by ADÈME**. After an initial drop of 8% in its emissions between 2011 and 2019, according to carbon balance reports that have been drawn up, Sineu Graff has defined an ambitious action plan, aimed at achieving the objectives set in the PARIS agreements for 2030.

Sineu Graff also attaches great importance to the durability and longevity of its products. Its street furniture is designed to resist weather conditions, wear and acts of vandalism, which helps reduce the need for frequent replacement and maintenance, and **avoids wasting resources**. In addition, the company takes a circular economy approach **by promoting the repair, reconditioning, reuse and recycling of its end-of-life products**.

Sineu Graff has been promoting short circuits for several years, as evidenced by the **“Local Partnership” Trophy** awarded by Idée Alsace (now ID Alsace) in 2012.

Sineu Graff strives to create, in collaboration with numerous designers, aesthetic, functional, eco-designed street furniture, thus contributing to the sustainable development of urban spaces. Thanks to these initiatives, Sineu Graff obtained **Janus de la Cité 2023, awarded by the French Design Institute**, for the lasting collaboration between a street furniture producer and designer Cécile Planchais, **for the new Tango range**.

See page 238 to find out more!

JANUS 2023  
DE LA CITÉ

The city, the hub of our personal, social and professional lives, remains the predominant model today in the early 21<sup>st</sup> century. Urban landscaping, with its configuration of volumes and empty spaces, creates convergence zones where the most divergent aspirations of the city mingle: public spaces.

We want them to be both quiet and busy, lively and cosy. However, our requirements remain unchanged: to experience pleasure when in the city, whether on foot, behind the wheel or riding a bicycle. The city belongs to us, which is why we all share the same feeling that public spaces and their furniture are designed for us, forming an integral part of our living environment.

Much more than just decoration, street furniture is perceived as an obvious choice, a necessary part of a fulfilling city lifestyle, a true service provided to its inhabitants. We do not expect that street furniture will provide the same service in a landscaped park as on a pedestrian route.

However, we always want to be able to find a seat, a litter bin nearby, especially since the emergence of soft modes of transport, synonymous with journeys made on foot, thus requiring a greater number of pleasant places for seating furniture.

How can we create these urban spaces, open to all, without furniture for rest, to keep the place clean, for leisure or safety, promising relaxation, health, Confort and protection? But also endowed with a unique aesthetic, in harmony with its times and its environment, whose style it determines almost exclusively.

To do this, a rich, broad range of designs and planning solutions is needed to satisfy the most varied tastes of the general public and adapt to each use and landscaping context. Relaxation furniture combining design and Confort that's ideal for social interaction, discreet but omnipresent availability of furniture that's all about cleanliness, controlled vegetation for street planting furniture, a feeling of security and calm for protective furniture, as well as open-access sports development solutions.

That's why our triple ambition is to make public space more attractive, create a soothing atmosphere and promote social ties. Our understanding of cities' goals for urban landscaping means we can consistently deliver real innovation. It's not just a matter of new products, but useful products that innovate and make life easier in the city,

products with integrated services. Ensuring the well-being of users of urban spaces by promoting sharing, Confort and pleasure is a fundamental commitment for us.

Our real ambition is to help increase the attractiveness of cities, sensitive to our know-how and culture of public tastes and concerns.

The secret of our expertise and our understanding of changing expectations, needs and uses related to furniture for relaxation, cleanliness, safety or leisure, lies in the relationships and interactions we have maintained for more than 50 years with our Customizeders, landscape architects, decision makers and specialist designers who help us validate the best solutions chosen by users. It's thanks to this proven experience that we can claim to be "public".

For us, it's essential to have an ambitious vision so that communities and their people can benefit from it.

# Sustainable city

## A sustainable future, one step at a time.

Sustainable development calls to mind a bright vision of a harmonious future between humanity and its environment. It's an approach that's part of a story of balance, where the judicious use of natural resources and preservation of biodiversity are at the heart of our actions. The optimisation of materials, the creative reuse and harmonisation of urban spaces reflect our commitment to a sustainable way of life. The necessary cooling of cities and restoration of soil permeability, particularly in schoolyards, add to this approach. By integrating more vegetation and permeable areas into our urban environments, we promote thermal regulation, reduce heat islands and improve citizens' quality of life. Composting in an urban environment, inspired by the natural cycle of plants, also demonstrates our desire to create communities that are more connected to nature and respectful of its rhythm. As such, the city is transformed into a laboratory of ideals where sustainability and preservation find a vibrant echo.

**Double stream reliefs**

Ref. 20 0320  
Inner bins 2 x 70 L  
Or bag holder 2 x 100 L

**The eco-designed Reliefs litter bin was created by eco-designer Philippe Riehling, with the aim of encouraging the reuse of our materials.**

Designed from the recovery of unstained wood scraps (larch or hardwood) previously used for the manufacture of seating furniture, the body of this bin is made of a random mix of these 2 wood species. Wood, even cut, continues to store CO<sub>2</sub>. So this bin is a real asset for cooling cities!

# Refuge bench®

**Design:** Julien HOFFMANN & Philippe RIEHLING  
Défi Ecologique

**Materials:**

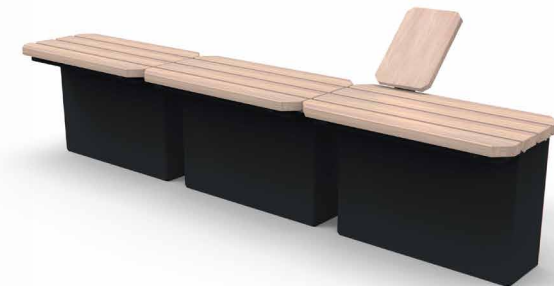

Structure and facings: Zinc and powder coated steel  
Seating: robinia

## Providing a participatory educational tool

A QR code placed on the Refuge bench® gives access to the site, explaining the device and its objectives, giving information on the insects that live there and their role in biodiversity. Internet users can join in by sharing their observations, which will provide a valuable mine of information and data to share.

## An urban seat to support biodiversity

### Encouraging nature back into the city

The Refuge bench® is meant to have a direct, local, visible impact on biodiversity. Different species of insect, such as Chrysopidae, ladybirds and Anthocoriadae can settle, flourish and reproduce in the substrates placed in the compartments, providing a source of food for the little insectivorous birds that have found their home in the nearby surroundings.

Grating: Structure in galvanised steel and unstained larch wood

Information panels in HPL

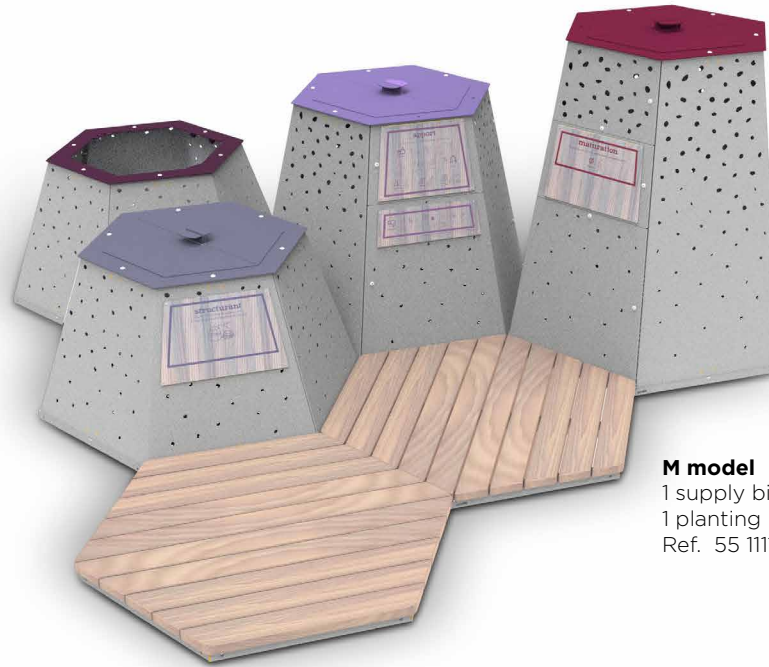

## Mote island: Widening access to shared composting in urban environments

The composting island consists of different bins, each of which has a specific function.

They are differentiated by height and a colour code to make them easy to identify.

The island embodies the plant lifecycle from growth to decomposition.

Different configurations are possible to help them adapt to the location, community and budget.

# Mote

**Design:** Aliénor MORVAN

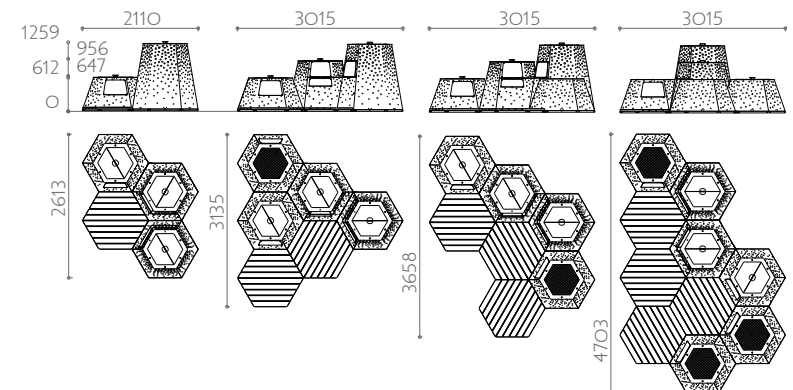

**Materials:**

Galvanised steel bins  
Lids in zinc and powder coated steel  
Grating: Structure in galvanised steel and unstained larch wood  
Information panels in HPL

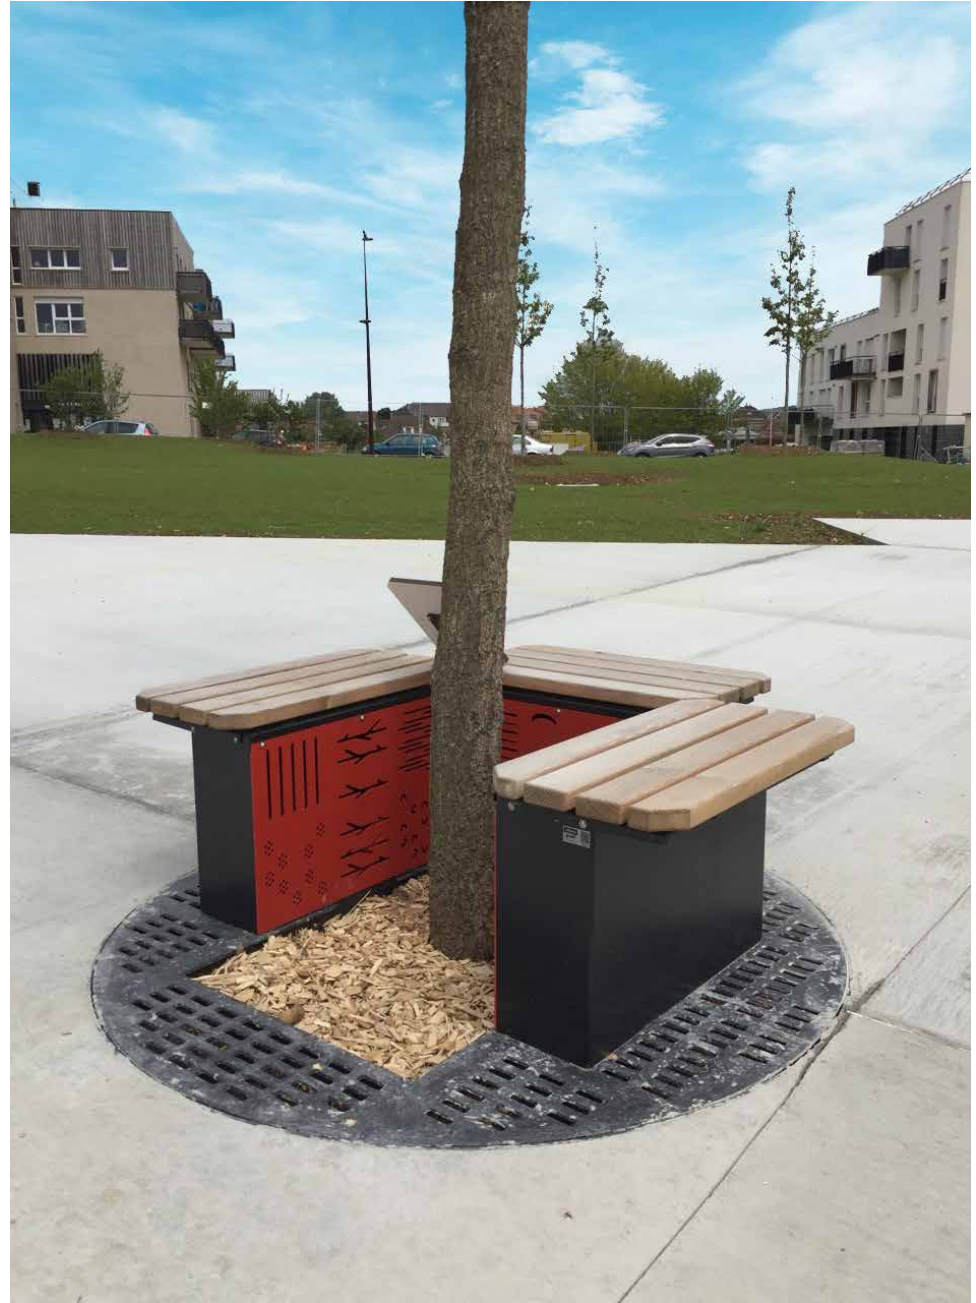

### Composition of the island:

- 1 An intake bin:** Users deposit their organic matter here.
- 2 A structuring bin:** storage of brown materials essential to the nitrogen/carbon balance (dead leaves, ground material, etc.). 1/3 bucket with each intake.
- 3 A maturing bin:** when the supply bin is full, the compost is transferred to a larger bin where it turns into fertiliser after a year.
- 4 Planting bins:** they embody the purpose of composting. The island therefore embodies the entire plant lifecycle from decomposition to growth and so on.
- 5 Wooden duckboards :** Providing dry access to the island.

# Clean city

## A litter-free environment

In an ideal world, everyone decks out their domain in style, creating the perfect, unblemished paradise. The discreet presence of furniture that's all about cleanliness takes on pivotal importance for those who promote the civic ethic. In this perfect world, public places are conceived as havens of interaction, promoters of shared harmony. Thanks to interactive digital tools, such as connected litter bins, ecology blends into everyday life, promoting seamless waste management. And so, looking after our environment, we trace the steps of a healthy, sustainable future.

Contemporary Evolution double stream

# Easy Grip®

Unique patented bag grip system  
European patent No. EP 3 592 666

To make the work of bin operatives easier and help them save time when changing bags from their bins, we have invented the Easy Grip system, a unique bag clamping system.

**Easy** because handling is easy, simple, fast and ergonomic.

**Grip** because the bag is properly held after the operation thanks to the lid and the gripping of the bag.

## Installing the waste bag

**1** Lid opening

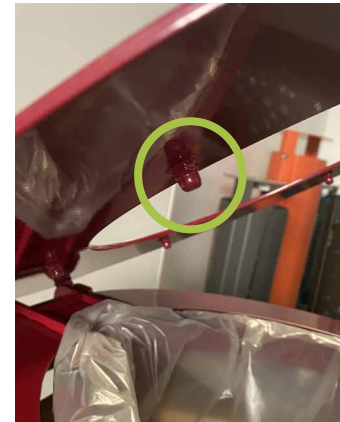

**2** Placing the bag on the hoop of the bag holder

**3** Closing the lid

**4** The **rounded tips** around the cover cap fit into the holes located in the hoop of the bag holder.

**5** Closing the lid on the bin liner holder **locks the waste bag** and **ensures it's held in place.**

## Advantages

- Time saving
- Operator safety
- Less handling
- Less risk of tearing the bag
- No breakage of the rubber strap
- Less maintenance

## Highlights

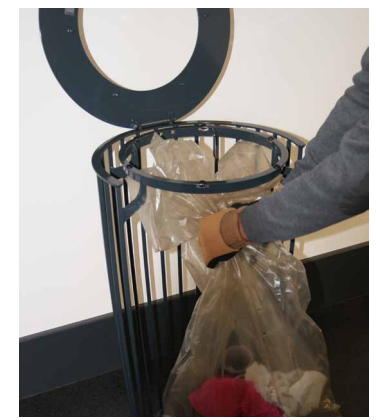

- Secure and barrier-free bag edging
- Ergonomic opening
- Easy, natural gripping of the bag
- Tool-free handling
- Optimised emptying time
- Aesthetic finish thanks to the lid
- Less maintenance

## Removing the waste bag - Easy model with front opening

**1** Lid opening

**2** Removal of the bag from below

**i** **Availability**

The Easy Grip system is available on all the Easy litter bins with lid, the Contemporary litter bin with bag holders, the new oblong litter bin, Reliefs litter bins and Link litter bins.

# Sorting shelters

**Design:** Sineu Graff

**Materials:**

Zinc and powder coated steel

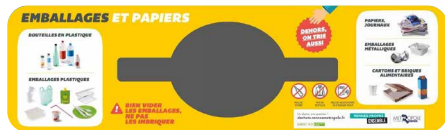

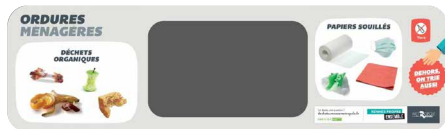

Sorting plates in zinc and powder coated steel or HPL

Sorting shelters can be placed individually or assembled together.  
They are available in 240 L, 360 L or 660 L.

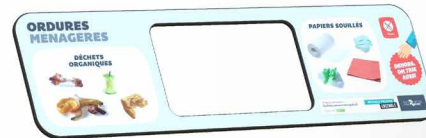

The steel plates are laser-cut according to required type of sorting.

The HPL signage panel is customisable according to the type of waste to be sorted.

**Customizable signage**

**A single opening.**  
**The addition of an HPL plate identifies the sorting system.**

**Depending on use,**  
**the HPL plate can be changed**  
**for a new sorting option.**

# Jumbo® - The patented to be buried tank system

**1** = **750L**  
**Waste bin**      **capacity**

## Adjustable suction flap

The suction flap is made from galvanised steel. It is non-slip and fitted with an automatic stainless steel lock.

## A litter bin

Litter bin attached to the Jumbo® with an anchoring ring. Other models which can be adapted to the cleanliness system are available.

## Adjustable anchoring ring

Made from galvanised steel.

## To be buried part

## A Jumbo® container

The Jumbo® is a 750 litre to be buried watertight container made from galvanised steel. It is fitted with four handling rings.

“Workers would like to see Jumbo® everywhere, as there would be no more contact with bags (and therefore waste) and no time wasted changing bags...”

**M. GARCIA - Marseillan**

## With i-apps, enter the smart city!

i-apps is an intelligent urban cleanliness platform to:

- geolocate and supervise all your litter bin equipment
- manage your collection rounds
- efficiently deal with reports and interventions to be carried out
- communicate within your municipality

## i-apps benefits

### FOR YOUR MUNICIPALITY:

#### Peace of mind

- complete supervision of the bstock of litter bins and collection rounds
- measuring collection effectiveness
- better internal and external communications
- secure data hosting in France

#### Savings

- optimisation of human resources
- optimal distribution of the stock of litter bins
- better management of overall costs (transport, equipment, teams, etc.)
- control of subcontracting costs

#### Eco-responsible

- reduction in greenhouse gas emissions
- reduction in the number of plastic bags used

### Satisfaction

- having statistical data for communicating with citizens
- improving the work of your agents

### FOR CITIZENS:

- a more attractive city
- feeling of security
- immediate response to citizen requests
- strengthens the feeling of belonging to the city

In partnership with  
**Divalto**

# i-apps

## The connected clean city

### In the field: 3 apps for 3 uses

#### 1 i-collection

The collection agent scans the QR-Code and indicates the filling level of each bin.

#### 2 i-canine

The collection agent scans the QR-Code and takes care of replacing or refilling the rolls.

#### 3 i-intervention

The maintenance agent carries out the intervention planned in advance via the platform.

At the end of their round, the agent places the reader on its base. The data is automatically transferred to the platform via wifi.

### At the office, on the i-apps platform

Check out all the management and operating features

#### i-Jumbo

The patented solution automaticall reading of the filling level

#### Equipment

**Container stock management:** defines the identity, geolocation, management and operation of each container...

#### Stats

**Managing and optimising** activity thanks to Customisable indicators and dashboards

#### Maintenance

**Managing maintenance interventions** whether or not linked to a connected object

#### Round

**Managing teams and collection rounds:** operating resources, distribution over the territory, indicators, anomalies...

#### Sorting

**Managing different types of containers:** dedicated round

#### Graffiti

**Cleaning graffiti:** managing dedicated sensitive areas

#### Bulky items

**Collection of bulky items and illegal dumping:** managing dedicated sensitive areas

# Intimate city

## Set the world to rights in public space

The city bursts with colour and bustle, offering a myriad of activities. Sometimes, lost in the crowd, we seek the essence of precious solitude. Then a haven opens up, pure and silent, full of kindness and indulgence.

Time stands still, this microcosm pulsates.

The green spaces resonate with a village echo, everyone rediscovering their own singularity.

The town takes a seat on a bench, resting from its own movement, weaving a social fabric through the creation of useful diversions.

# Green city

## Experience nature differently

The greenery in town, a delightful treasure, justifies its lush presence. Flowers and plants, a symphony of colour, offer city dwellers a myriad of benefits. They brighten up the cityscape, variations of soothing sizes, standing out from the stern facades. Plant evapotranspiration cools cities and amplifies soil permeability. Insects and birds find refuge in this haven of life. Above-ground floral structures, like earth's reservoirs, charm enthusiasts and reconnect us with our essence. By capturing CO<sub>2</sub> and lowering the temperature, urban flower beds, an engraved instinct, connect us to the earth. Our essence, our inner greenness, aspires to tread the earth in the city that surrounds us.

**Steel Garden**

# An innovative solution to save water!

# Sineu Flor®

## The clay ball, a material that's:

**Ecological:** it's natural, sustainable and recyclable.

**Draining:** an 8/16 calibrated ball, which allows for 45% empty space between the balls for better aeration of the roots.

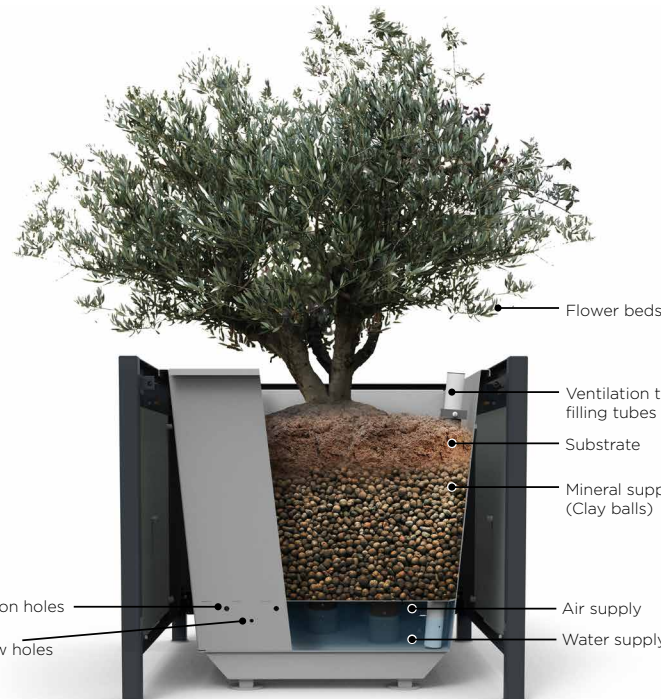

**Hydro-retentive:** retains rain or irrigation water.

**Hygro-retentive:** captures and restores humidity.

**Rot-proof:** technical and chemical durability.

**Incombustible:** possibility of operation inside buildings.

**Microporous:** fills with water without increasing in volume.

**Sineu Flor® is a patented solution that will help you save water and associated resources while optimising above-ground vegetation.**

Sineu Graff developed this patent to address an issue we encounter every day with our Customizeders.

**Developing high-quality street planting in cities** inexorably increases the consumption of water resources, time and labour.

However, this growing consumption of resources is not compatible with environmental objectives, budgetary requirements and increasingly limited resources.

Sineu Flor® is the solution that will let you continue flowering your city and enhancing your living environment. This patented innovation reduces both water consumption and watering frequency, while improving the quality of flowering.

## 1 Reducing water consumption

Sineu Flor® consists of a technical tank, a mineral support (the clay ball) and an enriched substrate.

The clay ball captures water (watering water, ambient humidity, condensation, etc.), stores and releases it: it means the plant can absorb water by osmosis.

The plant thus has a double water reserve: what's stored in the tray, and what's stored in the clay ball.

## 2 Reducing resource consumption

Reducing the watering frequency will free up some of the human resources dedicated to the task. Workers can then be redeployed to other tasks, which reduces the overall cost of flowering.

Example: City of Tomorrow - 60 hours of labour saved over a flowering season on 7 equipped Sineu Flor® planters.

## 3 Reducing greenhouse gases

In the case of manual watering, reducing the frequency of watering limits the frequency of vehicle visits, and therefore the release of greenhouse gases.

## 4 A universal solution

The Sineu Flor® system is suitable for all planters in the Sineu Graff street planting programme, including flower benches and mobile gardens.

**We also offer a bespoke service, with the option of adapting our patent to existing planters.**

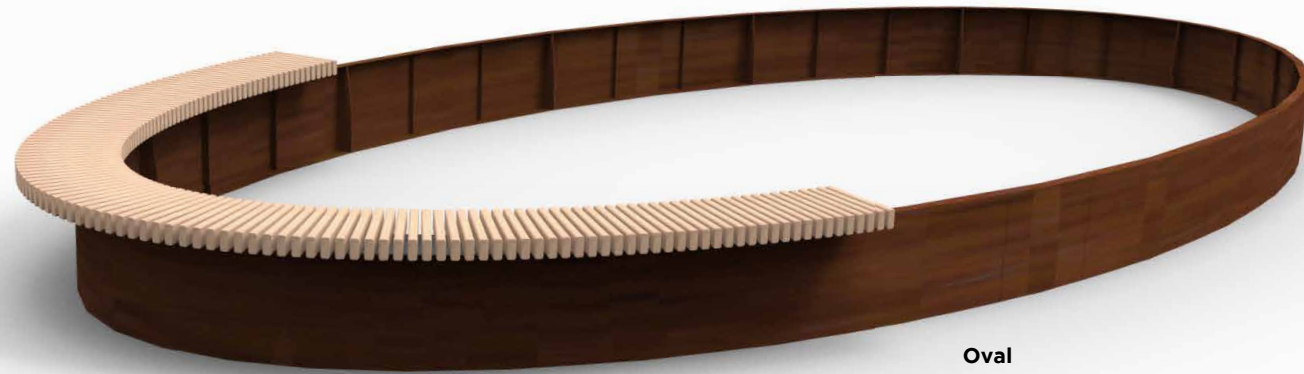

# Steel Garden

**Design:** Sineu Graff

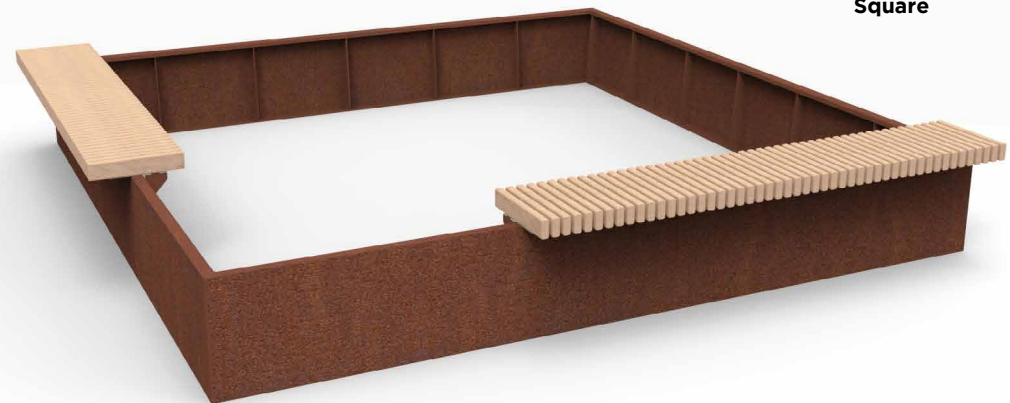

**Materials:**

Corten®-type untreated steel or with accelerated rusting treatment + protective varnish and stabilisation option  
Hardwood seating

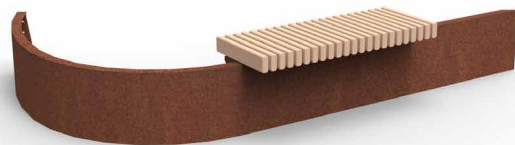

The shapes are made to measure to adapt to each layout.  
Seating is possible continuously or intermittently.

# Safe city

## No limit to safety

Discreetly positioned posts, barriers and bollards stand sentinel, guarding pedestrians and travellers in increasing numbers.  
Their magical operation, their orchestrated fluidity, keeps cars, bicycles, scooters and pushchairs in their proper place.  
Their muted presence soothes, protective without being intrusive, preserving our well-being, calming the commotion.  
Street furniture, strategically placed, inspires confidence and peace of mind, a subtle blend of restraint and obviousness.  
Essential symbols of a city in harmony.

The installation of Ylozen secures and calms the space, guarantees the separation of flows and restricts the crossing or intrusion of vehicles.

Combined, the **ready-to-install** Ylozen Feuilles and planters will free up the use of the space and create **shaded, refreshing, calm and safe areas**.

With **Ylozen**, add value to your landscaped projects and transform neglected and impersonal spaces into Comfortable and friendly **urban oases**.

# Lively city

## Let's bring sport to our environment

Sport gains in popularity when available, giving everyone the opportunity for training, self-fulfilment and caring for their well-being. City gardens, taking a more global vision, welcome within their core temples of fitness, training and games for all.

Here, diversity finds its place, adapted to everyone, from children at play to the multisport teenager and seniors looking to keep in shape. The city takes on a lively air, giving everyone the chance to be on the move, free and active, with no physical or age limit. Sheltered under a protective structure, outdoor sports can deal with the vagaries of the weather.

The Mouv'Roc<sup>®</sup>, universal shelter becomes the go-to place for novices and enthusiasts alike, where diversity flourishes within the beauty of sport.

# Ingenious city

## Imagining the city of the future.

To charm and enchant its people, a city must offer street furniture with a subtle aura. Like a visual language, it employs shapes, materials and colours to reflect the harmonious aesthetics of its design. It reveals the unique essence of each neighbourhood, offering personalised facilities to its residents. The graceful alliance of these elements shapes the identity of the city, a soothing aesthetic woven with real sensitivity. The time we spend there reflects its appeal, a useful mirror of its popularity. With the increasing footfall of visitors and users, brought by soft public transport, the city opens up a new landscape, full of vibrant, attractive vitality. And so a virtuous circle takes shape, where everyone finds fulfilment.

The 'Freedom Bench' was created by Arch. Cindrella W. Semaan for Red Sea Global, in Saudi Arabia. It is designed as a seat summarizing Red Sea Global's social and sustainable development vision.

The "Freedom Bench" is a piece of durable, eco-friendly furniture, inspired by the flowing shapes of the Red Sea's waves and sand dunes, which intersect in the middle of the seat structure to connect with the roots in the ground, where a tree is added as a source of shade.

The floating wings represent the vision of freedom, pride, security and uniqueness that Red Sea Global seeks to offer every visitor.

**Sineu Graff has risen to the challenge of 2024: to offer the greatest athletes in the world an innovative urban landscape, suitable for everyone, integrated, sporty and sustainable that future generations will be able to use.**

For this extraordinary project focused on inclusion without stigmatisation, Sineu Graff has brought three talented experts on board: Clément Willemin (Agence Wald) for design and integration into the landscape, Alexandre Moronnoz for design and use, Philippe Moreau & Ricardo Leone (Tactile Studio) for inclusive and sensory design - openness to all forms of impairment, especially visual impairment. Together, they created "PODIUM", a range of inclusive street furniture, which addresses present and future challenges. The Podium range reflects the image of the Olympics: excellence, difference, skills, games... Who hasn't dreamed of one day stepping onto the PODIUM!

# About Sineu Graff

## Producer of street furniture for over 50 years

A major partner of project owners and designers, Sineu Graff offers professionals in the landscaping of public space a complete range to meet the needs of users and build the city of tomorrow.

**Sineu Graff designs products and solutions** with its design and innovation department, **manufacturing them entirely in its** historic workshops, in Kogenheim in Alsace, equipped with the most innovative processes and technologies, carrying out the paint treatment itself, and offering them to the market through its integrated commercial network as close as possible to its Customizeders.

This organisation is supplemented by **an international network of more than 30 distributors.**

## Commitment to sustainable development

Sineu Graff, through a new production methodology, reflects and invests in industrial and technical processes that use the most advanced technologies to combine economic and environmental performance.

An eco-design approach is systematically applied to product development. They are designed from **100% recyclable materials** whose use is optimised (management of offcuts, maintainability, etc.), such as wood, steel, stainless steel, aluminium, recycled high-density polyethylene and cast aluminium. They are **all recyclable at the end of their life.**

Our industrial production tooling has been the subject of constant investment, guaranteeing the **implementation on our production site of processes that have the least impact on the environment** by eliminating organic solvents in wood finishing treatments, and the introduction of technical solutions that save energy and resources.

Sineu Graff also offers a **specific range of furniture to promote reuse and/or committed to biodiversity**, such as the Refuge® seat for insects, the Mote urban composter, the Reliefs litter bin and Greffon seating furniture.

Finally, we offer **spare parts** for the maintenance of our furniture, as well as a repair programme, on site or in the workshop, to **extend the life cycle of furniture** and ensure its reuse.

## Designers

This industrial and environmental design can only be achieved thanks to a collaboration of trust with numerous designers, all driving forces behind the Sineu Graff philosophy of quality, originality, ergonomics and use.

With them, many pieces of furniture have been created:

**Bernard ALTHABEGOÏTY:** Conversation, Conversation Tablette, Azur Tab'

**Charles BOVÉ:** Contemporary litter bin

**Emmanuel CAIRO:** Diapason

**Coline CHABIRON:** Bobine

**Gwendoline DOS SANTOS:** Greffon

**Yannick & Camille CLAESSENS-VALLET:** Grand Large

**Julien HOFFMANN & Philippe RIEHLING -**

**Défi Écologique:** Refuge Bench®

**Arturo ERBSMAN:** Idylle, Pétales, Eidos

**Michael HENNEMANN:** Nine

**Vincent MAYOT - Agence Mayot et Toussaint:** Volubilis

**ALEXANDRE MORONNOZ:** Arobase, Podium,

**Aliénor MORVAN:** Mote

**Cécile PLANCHAIS:** Garden City, Optima, Opticar, Jardins Mobiles, Tango

**Philippe RIEHLING:** Link, Azur, Reliefs

**Emmanuel ROULET:** Rendez-Vous, Zenith, Metropolis

**Fred TERRY - Agence STOA:** Twist, Live

**Clément WILLEMIN:** Rubber Line

## Our low-carbon strategy through our “ACT Step by Step” approach

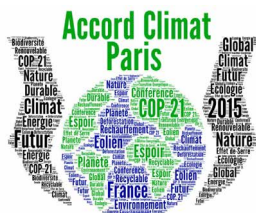

In response to the carbon assessment carried out in 2019, **Sineu Graff adopted an energy sobriety plan as well as an ambitious policy in terms of SER** (Social and Environmental Responsibility).

The main objective of this plan, in correlation with the Paris agreements and the plan led by ADÈME, is to reduce our CO<sub>2</sub> emissions by 20% by 2035.

For this, after the installation in 2020 of a biomass boiler using wood scraps and dust from our carpentry manufacturing to supply the offices and workshops with heating, as well as our stain drying oven, we have determined a plan of action based around 5 pillars:

- Redefinition and prioritisation of suppliers committed to a low-carbon policy
- Transparent institutional communication on our low-carbon policy
- Commitment to a circular economy and creation of an offer to extend the life of furniture
- Development and design of virtuous products systematically integrating the carbon impact
- Raising employee awareness of low-carbon culture, all becoming project leaders

The deployment of this low-carbon transition strategy is carried out with the company Alternative Carbone according to ADÈME’s “Act Step by Step” system.

## Our certifications

### 4 patents

**City Confort®** - seating furniture range: system for assembling round bars on spacers.

**Jumbo®** - litter bin range: revolutionary method of collecting urban waste.

**Easy Grip®** - litter bin range: Unique patented bag grip system | European patent

**Sineu Flor®** - street planting range: optimising revegetation by saving water and associated resources.

### 500 model deposits

Sineu Graff owns more than 500 models (registered with the National Institute of Intellectual Property), divided into 5 product families: seating furniture, cleanliness, street planting, protection and safety, sport and health.

### Sineu Graff is FSC® and PEFC certified™

Our company is **FSC®**-certified and subject to the FSC® (CDC) chain of custody, which guarantees traceability in the route taken by products from FSC®-certified forests, or, in the case of recycled materials, from the recovery of materials to the point of sale.

In addition, for local wood, Sineu Graff is labelled **PEFC™**.

JANUS 2023 DE LA CITÉ

Sineu Graff received the Label of Excellence

**Janus de la Cité 2023**

from the French Institute of Design.

## Networks and partnerships

Active member of the **Street Furniture Group of French Furniture.**

### Partner of urban landscaping professionals:

**FFP:** French Landscape Federation,

**HORTIS:** Managers of Nature Spaces in the City,

**AITF:** Association of Territorial Engineers of France,

**ATTF:** Association of Territorial Engineers of France,

**ANDIISS:** National Association of Directors and Operators of Sports Facilities and Services,

**CNVVF:** National Council of Flower Towns and Villages,

**ARF CENTRE VAL DE LOIRE:** Regional Association for the Street Planting and Enhancement of Municipalities in the Centre-Val de Loire region.

**Member of Sustainable Initiatives, initiatives in sustainable development,** reference network in the Grand Est committed to economic, societal and environmental responsibility.

**Member of ImaginAlsace:** the Alsace shared brand is a “flagship” that symbolises the region, its identity, its values, as well as its objectives and future. It belongs to all the stakeholders who promote the influence of the region.

# Our materials

Sineu Graff furniture is intended for outdoor use: it must withstand all types of weather conditions and intensive collective use. To do this, it carefully selects wood species and types of steel, and applies special treatments if necessary for optimal protection and resistance over time.

## Wood

A warm and natural material, wood imbues our furniture with Confort, a pleasant feel, and a polished appearance. Available in different species, our furniture is made from wood harvested exclusively from natural forests. The premier choice, they come from sustainably managed forests and are labelled FSC® (hardwood) or PEFC® (local woods).

All our furniture is available in FSC® wood on request.

For its furniture, Sineu Graff has chosen to use different types of wood: ash and larch of French or European origin, and hardwood from West African forests.

In their natural version, hardwood and larch do not require any surface treatment thanks to their resistance and natural rot-proofing if they remain out of contact with the ground.

Hardwood can also be stained and painted for aesthetic purposes.

As for ash, it must receive a surface treatment to protect it against fungi and parasitic insects: autoclave treatment if the wood remains in its natural version, treatment by application of stain if the wood is painted.

The wood stain treatment is carried out on our automatic lacquering line in our factory in Alsace.

### The colours proposed:

Sineu Graff proposes a wide choice of colours for wooden parts. Standard options are: natural or light oak, walnut, mahogany, and certain opaque wood stain colours, as per the colour chart. On request, other colours in the ral colour chart can be applied to wooden parts.

## Steel

A material used for its solidity, its pliability, and its capacities for transformation (folding, bending, cutting, rolling) and for assembling (welding, bolting), steel guarantees furniture the highest degree of solidity.

Materials are obtained from suppliers specialising in the production or marketing of stainless or special steels. The steel used in our workshops is of S235 quality, standard NF EN 10027, or S235, depending on the type of furniture. All stages of processing our steel sheets and profiles are carried out in our workshops.

Following manufacturing of furniture in crude steel, the steel parts are then treated either by galvanisation or by electrolytic galvanising to ensure optimum rust protection and sustainable performance.

### Zinc and powder coated steel

The furniture is treated by powder coating according to our Powder Blast process, carried out on our site in Alsace.

### POWDER BLAST: the Sineu Graff paint guarantee

A series of four operations in a continuous process ranging from preparation of parts to their painting and consisting in:

- Alkaline degreasing, followed by rinsing and meticulous drying, in order to wash and degrease the parts
- Shot blasting of the parts in order to treat the fillet welds and make the part surfaces homogeneous and rough to ensure good mechanical adhesion of the powder paint
- Application of an epoxy powder anti-corrosion primer, zinc-enriched, polymerised by gelification at 120° (thickness 60 Qm)
- Application of a polyester finishing powder after cooling, giving the chosen colour, polymerised by oven treatment at 180° for 40 min (thickness 60 to 80 Qm).

Application of powders (primer and finishing) takes place by electrostatic process to ensure homogeneous and continuous distribution of powder on the part.

### Galvanised steel

Galvanising protects steel from corrosion, thus guaranteeing it a remarkable life span, while offering a neutral visual aspect that bestows on steel all its nobility. This treatment consists in covering a part with a zinc coat (thickness 60 Qm) by immersion in a molten zinc bath at 450°C.

We use this treatment on certain ranges for steel parts intended to remain in their untreated state, such as the galvanised steel link structure or other components that don't need to be painted.

# Our warranties

The Sineu Graff furniture and spare parts benefit from warranties that vary according to the models and under the following conditions:

- 10 years** **Wooden parts**  
 Parts are guaranteed against decay under normal conditions of use (excluding splits, cracks, vandalism, impacts). The warranty concluded depends on the wood species.
- 2 years** **Stain treatment**  
 This treatment is guaranteed in normal conditions of use (excluding vandalism, impacts).
- 10 years** **Metal and cast iron parts**  
 These parts are guaranteed against perforating rust in normal conditions of use (excluding vandalism, impacts).
- 5 years** **Powder Blast paint treatment**  
 This treatment is guaranteed in normal conditions of use (excluding vandalism, impacts).
- 10 years** **Galvanising of metal parts**  
 These parts are guaranteed against perforating rust in normal conditions of use (excluding vandalism, impacts).
- 10 years** **HPL (high pressure laminate)**  
 This treatment is guaranteed in normal conditions of use (excluding vandalism, impacts).
- 5 years** **Reinforced Recycled Plastic Parts**  
 RRP parts (reinforced by metal insert) are guaranteed against perforating rust under normal conditions of use (excluding vandalism, impacts, etc.).
- 10 years** **Spare parts**  
 We guarantee the supply of spare parts if a product is no longer manufactured.

## Cast iron

Sineu Graff uses lamellar graphite (LG)-quality cast iron for the legs of the seats or spheroidal graphite quality (SG) for the pebble pot, for example.

Cast iron remains the ultimate durable material, with a lifespan of up to hundreds of years. It offers the most varied possibilities of shapes, as well as a material effect provided by its texture.

Cast iron is painted using our Powder Blast process for better corrosion resistance, ensuring that Sineu Graff furniture has a very high aesthetic quality.

## Reinforced Recycled Plastic

Sineu Graff offers a selection of urban furniture with seats made of recycled reinforced plastic. This material is the ideal solution for spaces with a lot of traffic and that do not require any particular maintenance.

The raw material of recycled reinforced plastic is entirely made of a recycled plastic material (HDPE, LDPE and PP), originating from Western European countries. The mass-dyed boards are made by an extrusion process and are available in 5 colours (Sand, grey, black, green, brown).

## HPL laminated panels

Sineu Graff uses laminated panels, based on high pressure duromers (HPL, High Pressure Laminate) manufactured in laminating presses at high pressure and high temperature. Twice-hardened acrylic polyurethane resins guarantee them outstanding protection against the elements and UVs.

Panels are resistant to scratches, impacts, and solvents, and offer outstanding dimensional stability. This material is very easy to clean.

## Stainless steel

Stainless steel exhibits outstanding corrosion-resistance and does not rust-up, thus making it highly durable. Stainless steel is also used for its aesthetic appearance.

Sineu Graff has chosen grade 316L, called the food grade, over grade 304, in order to ensure optimum durability of its furniture even in harsh environments (saline, wet, etc.). Molybdenum, a component present in stainless steel grade 316, exhibits better corrosion protection in difficult environments.

## Corten®-type weathering steel

Street furniture made of weathering steel, often called Corten® steel, brings a modern yet natural look to the landscape and is appreciated for its resistance and longevity.

Corten® steel is made up of different alloys such as copper (Cu), chromium (Cr), nickel molybdenum (Ni Mo) and phosphorus (P).

This combination increases corrosion resistance by the formation of a self-protective coat known as “patina” with the properties of an S355 grade steel. Normally obtained thanks to transformation factors such as climatic factors (rain, wind, temperature variations, etc.), based on untreated steel, the patina can be obtained by accelerated processes.

Sineu Graff offers different treatments:

- untreated Corten® steel
- rusted Corten® steel
- rusted, varnished and baked Corten® steel.

# Website

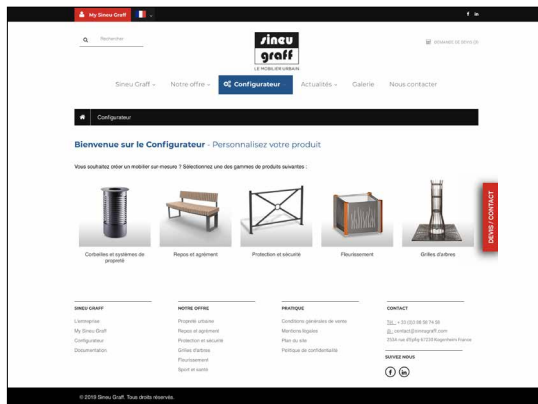

The product which is the best suited to your needs from the extensive ranges of options, equipment and Patterns can be yours in just a few clicks. The skill of the design lies in the fact that it gets straight to the point.

**and configure your street furniture in just a few clicks!**

**At any time, you can ask for help with your approach...**

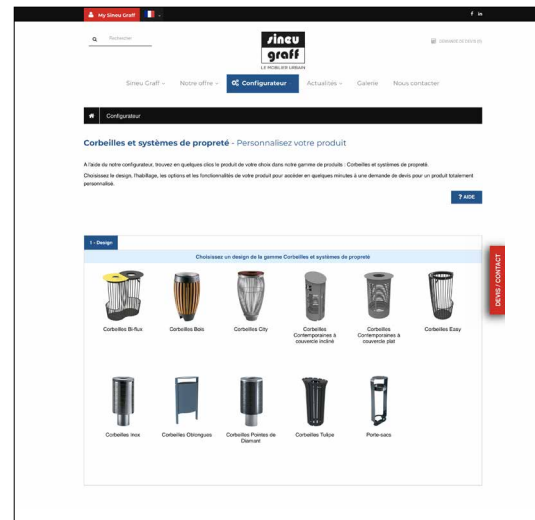

**Click!**

DEVIS / CONTACT

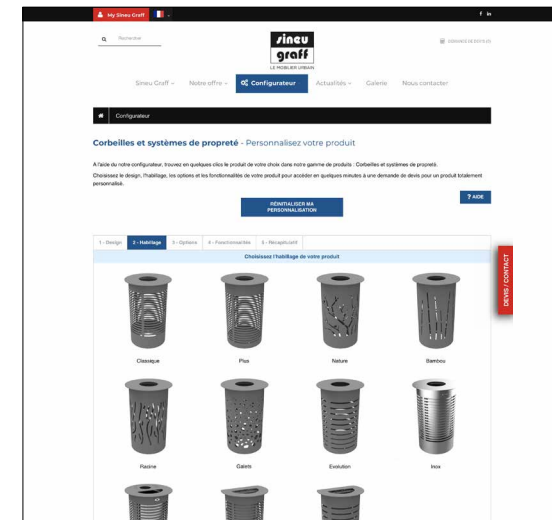

## ▶ Select the product category

Discover all groups of street furniture which, when combined, make the city more human, more lively and more natural.

## ▶ Select the design and the range

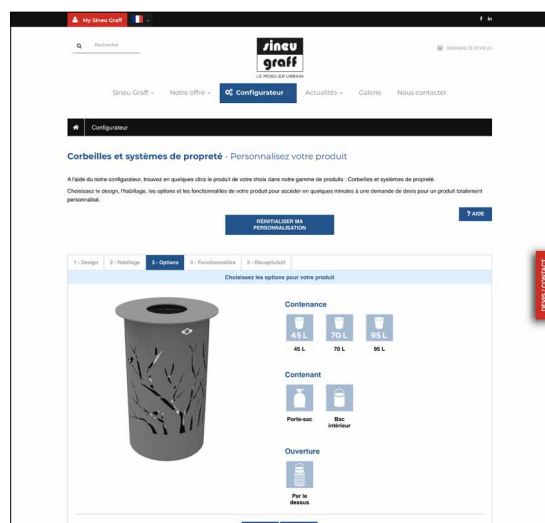

You will find the same wide range of designs and styles everywhere. Every district of a city has its own personality and, like every company, its own brand image. Configure yours!

## ▶ Select the patterns

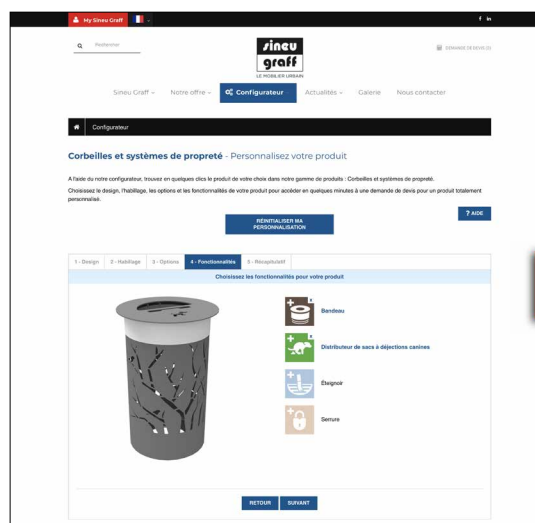

The casing is the first impression we have of furniture which is meant to be discreet whilst knowing how to stand out.

# Configurator

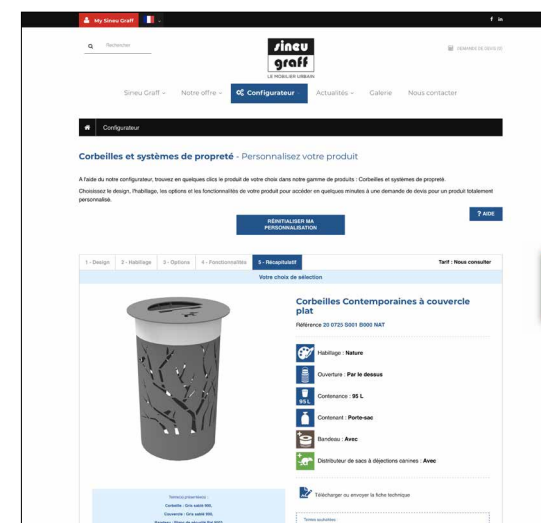

## ► Select the options

A seat with armrests. A waste bin which opens from the top? A tree grille with a reinforced frame. These are the details which reflect the know-how.

## ► Choose your accessories

You will be surprised to note that we have thought of everything. Accessories such as the cigarette snuffer for waste bins have been invented by observing daily life.

## ► Get a quote and place an order

All your furniture items have been reviewed and carefully selected. The prices will be calculated as accurately as possible.
